

PEHD PIPE PN8 40mm

1.Product Description:

The pipes for protecting optical cables are made from high-density polyethylene. They offer excellent impact resistance, high flexibility, outstanding chemical resistance, elasticity, dimensional stability, ease of joining, low weight, and excellent pressure resistance. These qualities give the pipes an advantage and suitability over other materials.

2.Application:

These pipes are intended for the protection of optical cables.

3.Physical Properties:

Dimensions: 40 x 3,0

Pressure: PN8

Material Composition: High-Density Polyethylene (HDPE)

4.Packaging and Storage:

The pipes are packaged by winding them into bundles. They should be stored on a flat surface, protected from low temperatures and direct sunlight.

5. Recycling:

Recyclable according to the PEHD-02 classification.
