

PEHD PIPE PN8 50MM

1. Product Description:

Pipes designed to protect optical cables are made from high-density polyethylene (HDPE). These pipes offer excellent impact resistance, high flexibility, outstanding chemical resistance, elasticity, dimensional stability, easy joining, low weight, and excellent pressure resistance. These characteristics give these pipes an advantage and suitability compared to other materials.

2. Application:

These pipes are intended for the protection of optical cables.

3. Physical Properties:

Dimensions: 50 x 3,7

Pressure Rating: PN8

Material Composition: High-Density Polyethylene (HDPE)

4. Packaging and Storage:

The pipes are packaged by winding them into bundles. They should be stored on a flat surface, protected from low temperatures and direct sunlight.

5. Recikliranje:

Recyclable according to the PEHD-02 classification
